

CMC STRATEGY FORUM

ADVANCING BIOPHARMACEUTICAL DEVELOPMENT

NORTH AMERICA 2024

KNOWLEDGE SHARING AND CAPACITY BUILDING

- Discussions revolved around two main topics: *“Establishing and Leveraging Platforms to Support Product Development”* and *“Securing Patient Well-being: Best Practices for In-Use Stability and Compatibility Studies”*.
- Automation of platform methods can result in *faster cycle time, increased portfolio capacity, and enhanced understanding of programs* as a result of collecting “more” data.
- When testing in-use stability using an aged product, *selecting appropriate acceptance criteria is complex* for products whose quality changes over its shelf-life storage.
