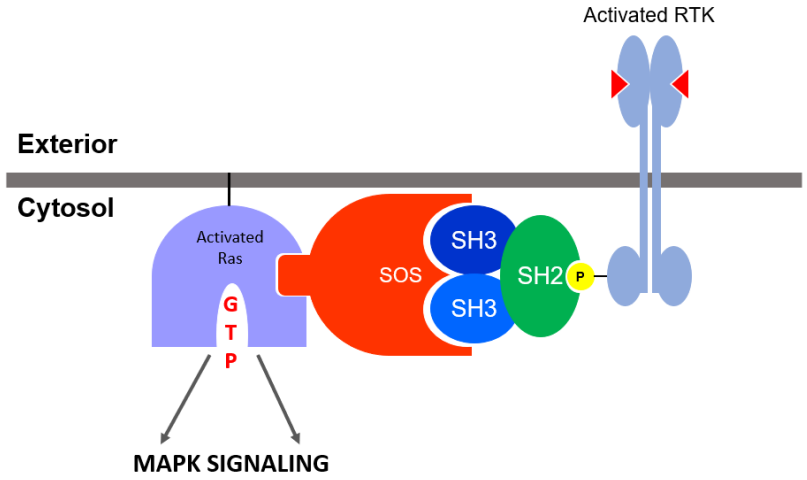
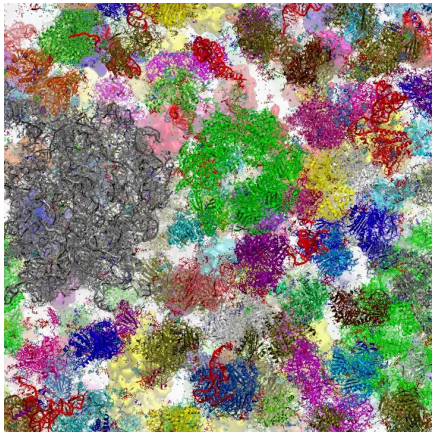
April 10, 2018

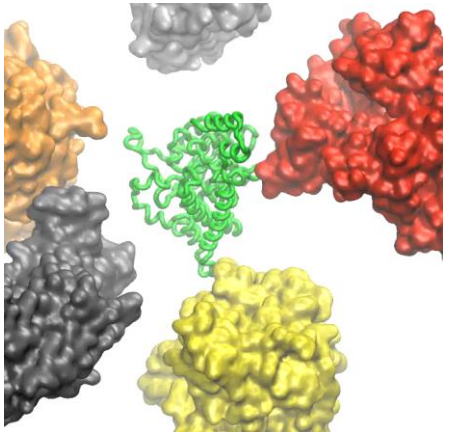
From fundamentals to applications

Biophysics of cell signaling



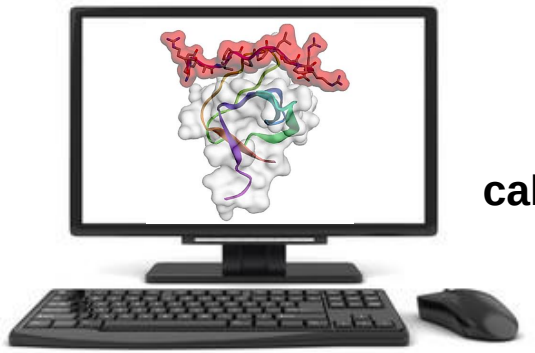
Computation

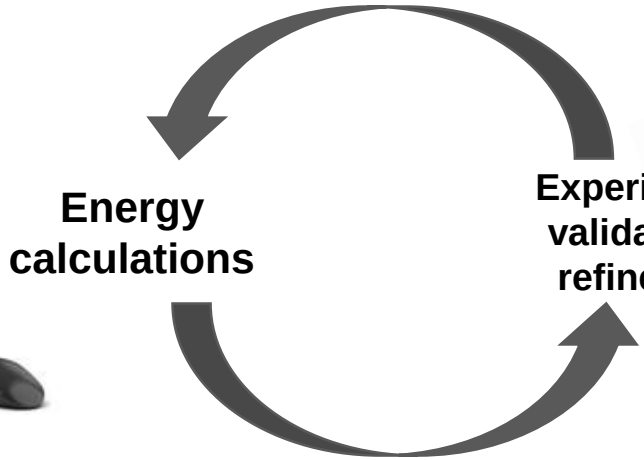




Yu *et al.* eLife. (2016)

Biotherapeutic design and development



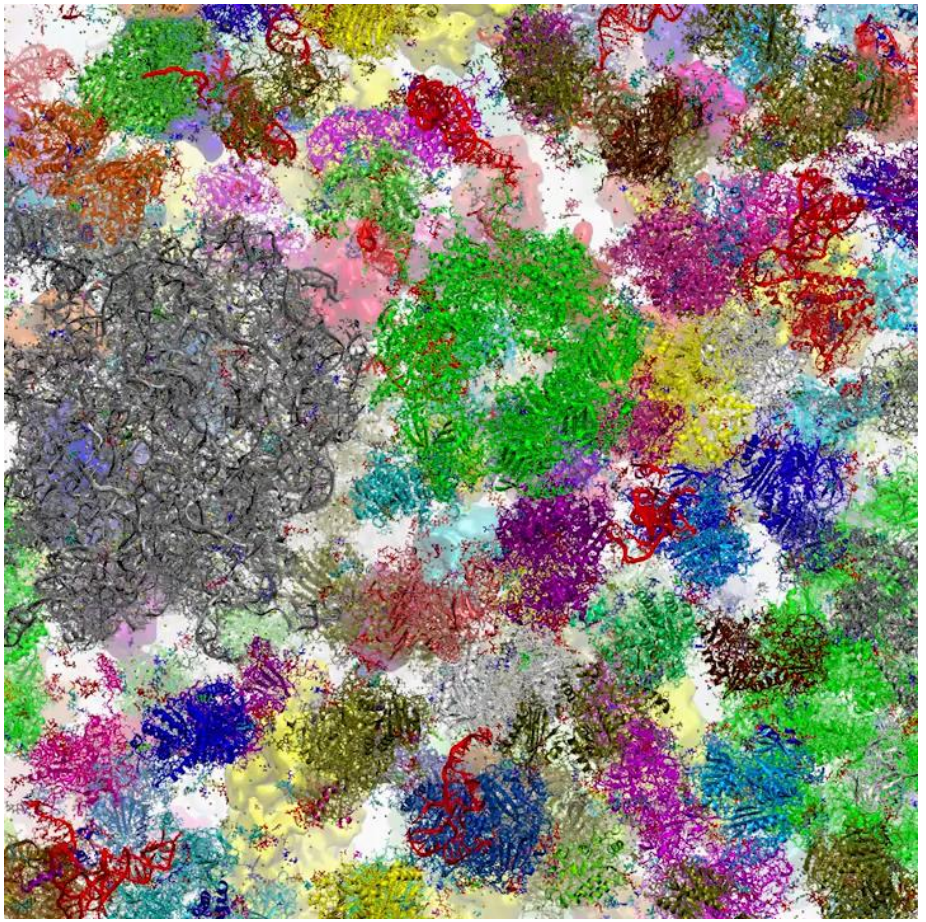


Cells are crowded and dynamic

Most experiments

Buffer
< 10 g/L

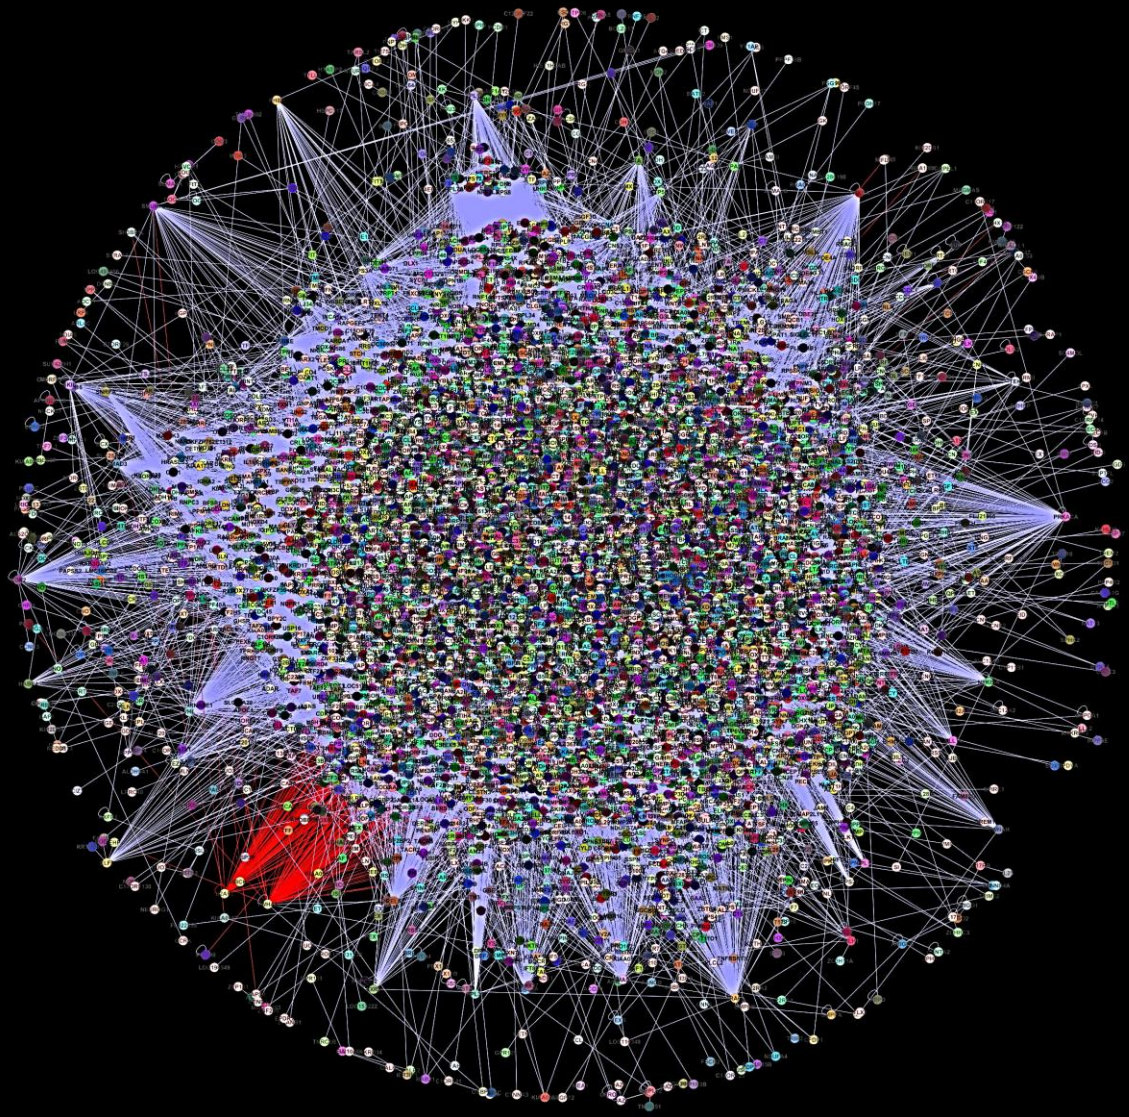
Proteins' native environment



~ 300 g/L macromolecules

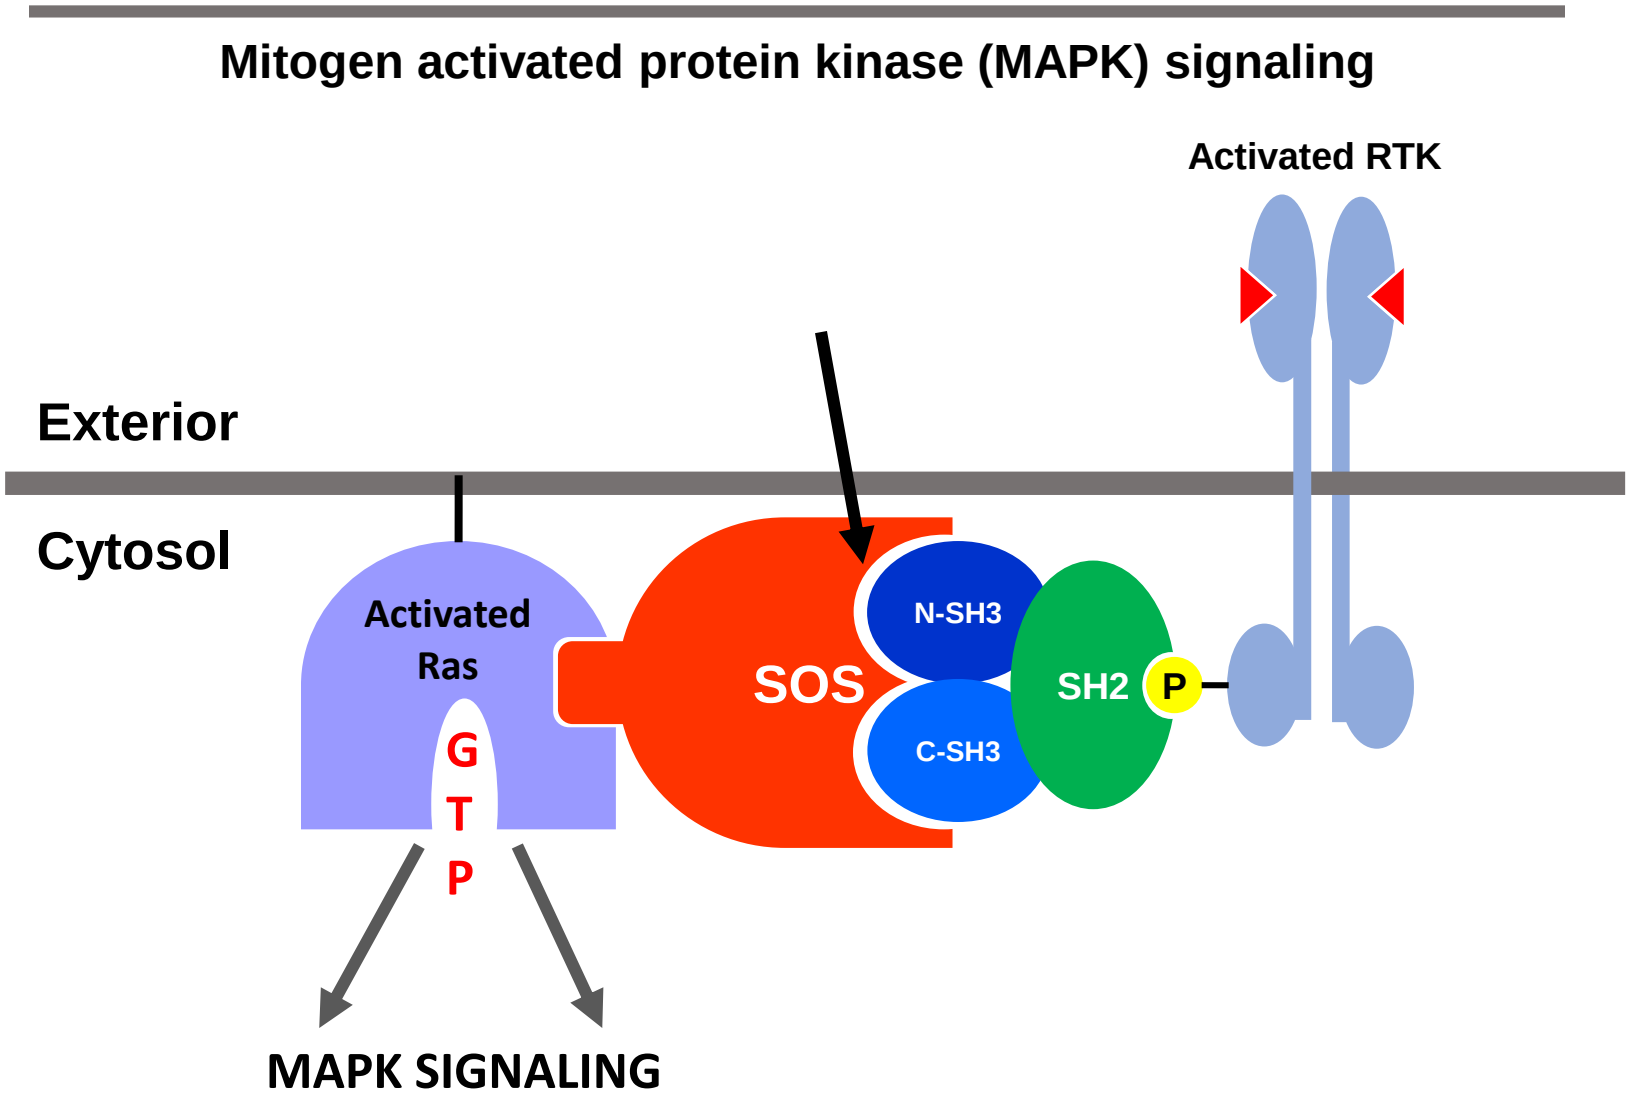
Yu *et al.* eLife. (2016)

Protein-protein interactions are essential to life



A. Garrow, Human Interactome, 2006, https://www.flickr.com/photos/andytrop/5234326542/in/album-72157625527595330/

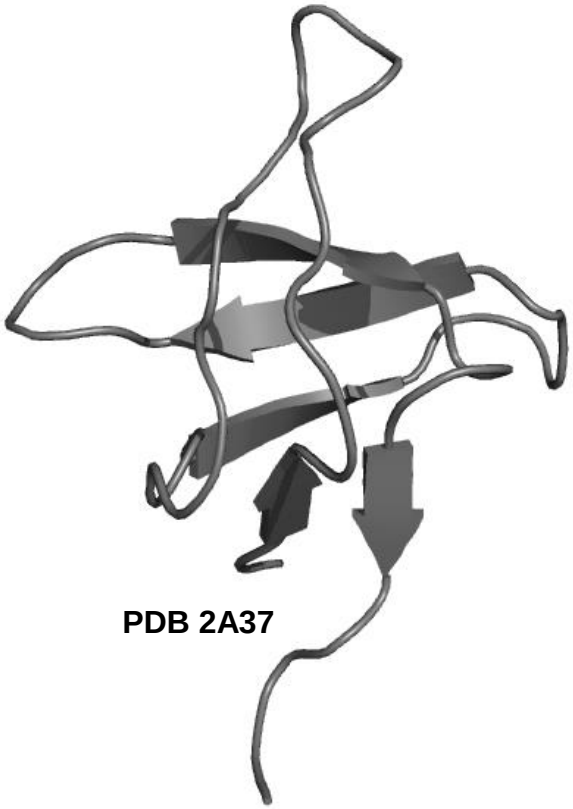
SH3 interactions are important for cell signaling



Adapted from: Lodish, Molecular Cell Biology

Protein and peptide of interest

N-terminal SH3 domain from adaptor protein

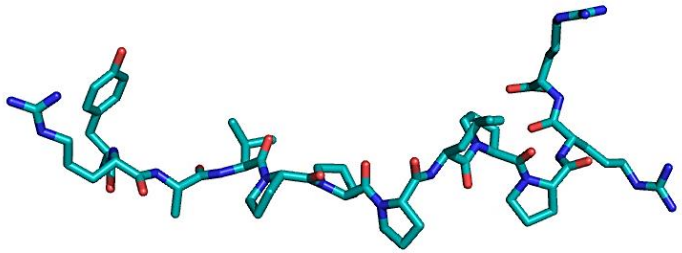


PDB 2A37

6.8 kDa
pI 4.8

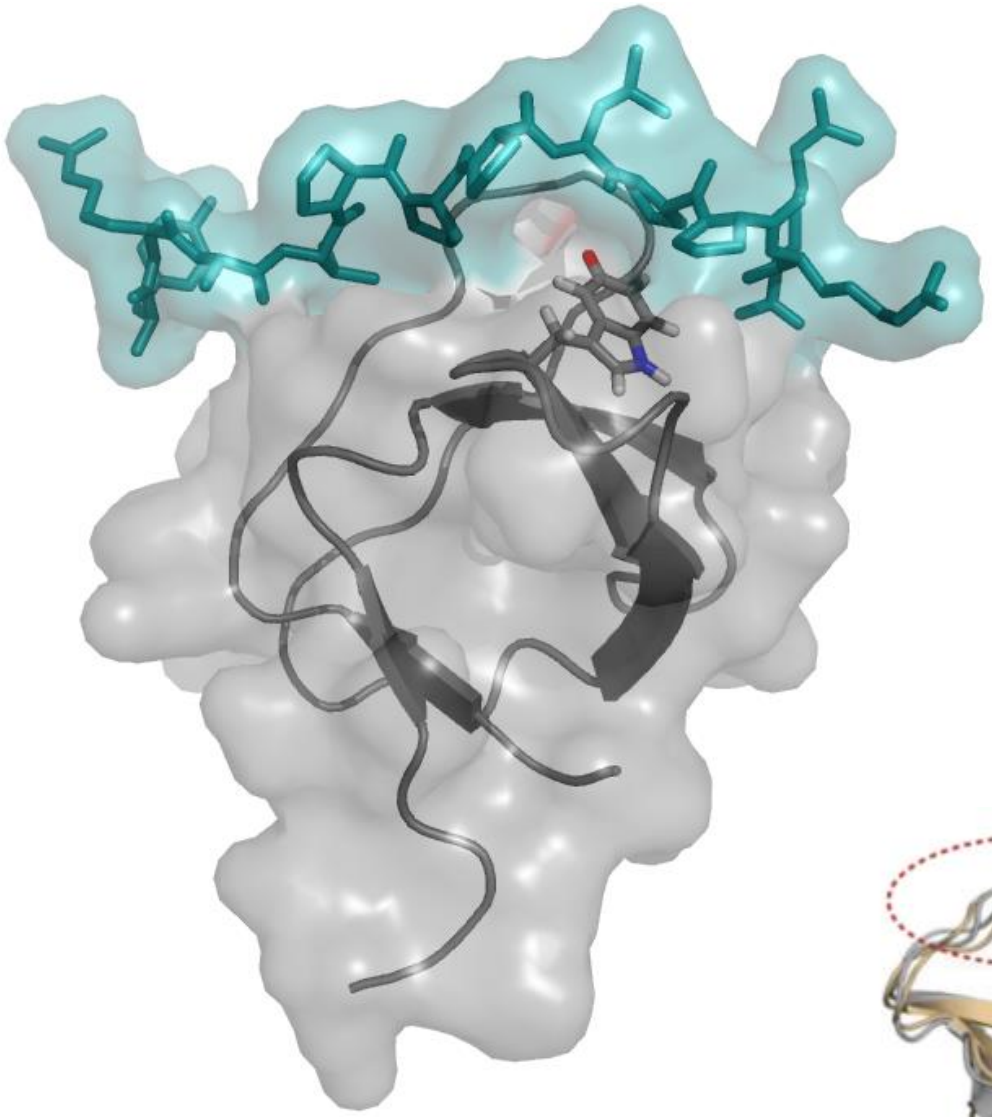
SOS peptide

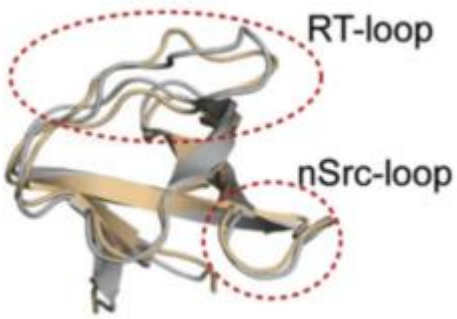
Sequence



1.4 kDa
pI 11.7

Predicted bound structure





Kurcinski, M. *et al.* Nuc. Acids Res. (2015)

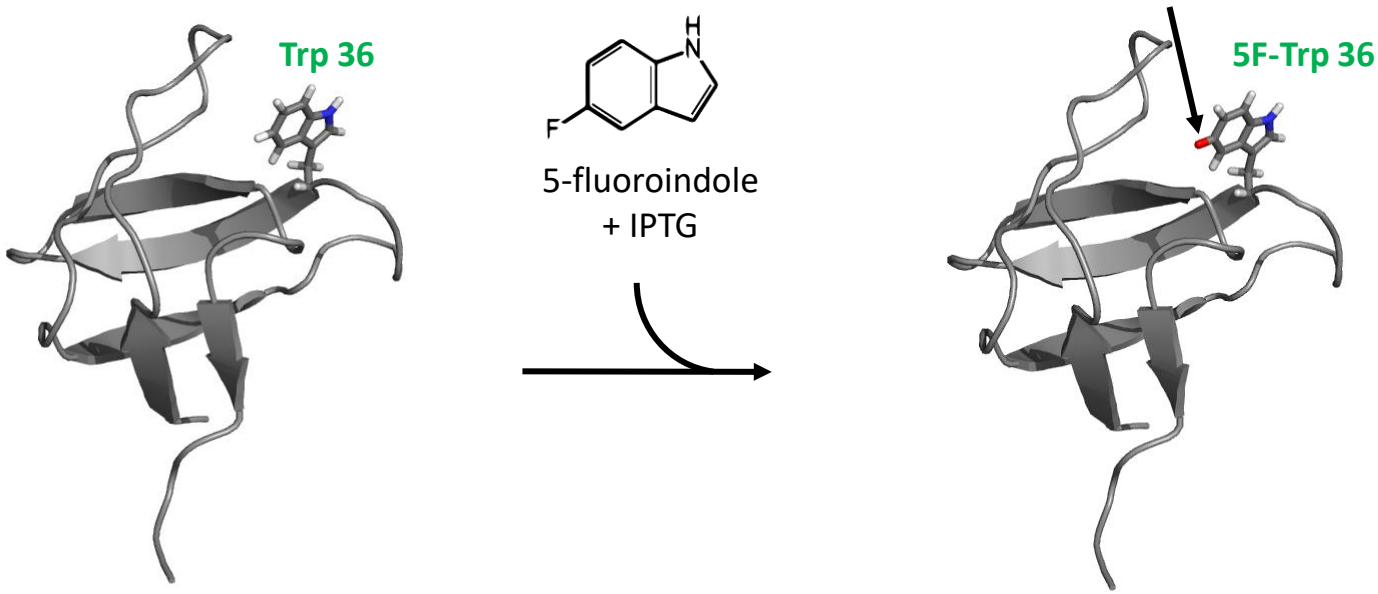
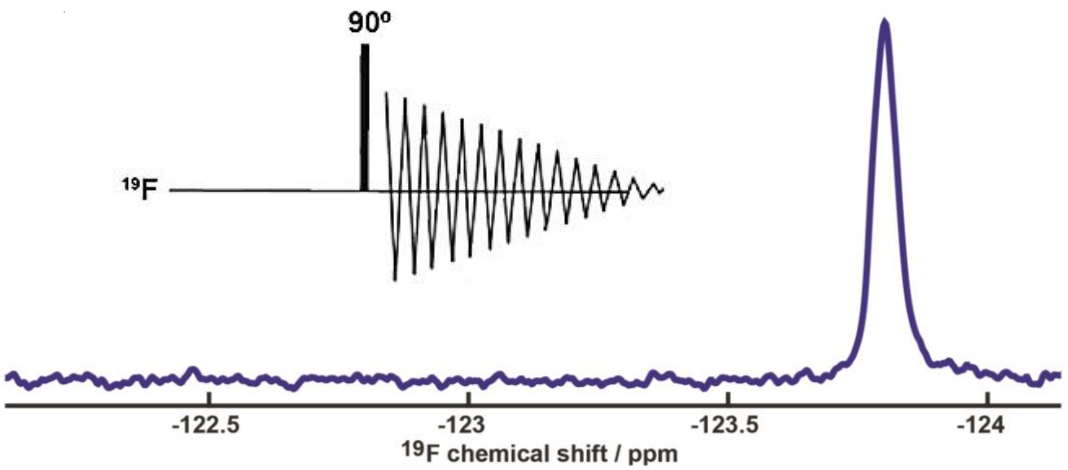
^{19}F labeling of SH3





^{19}F NMR advantages

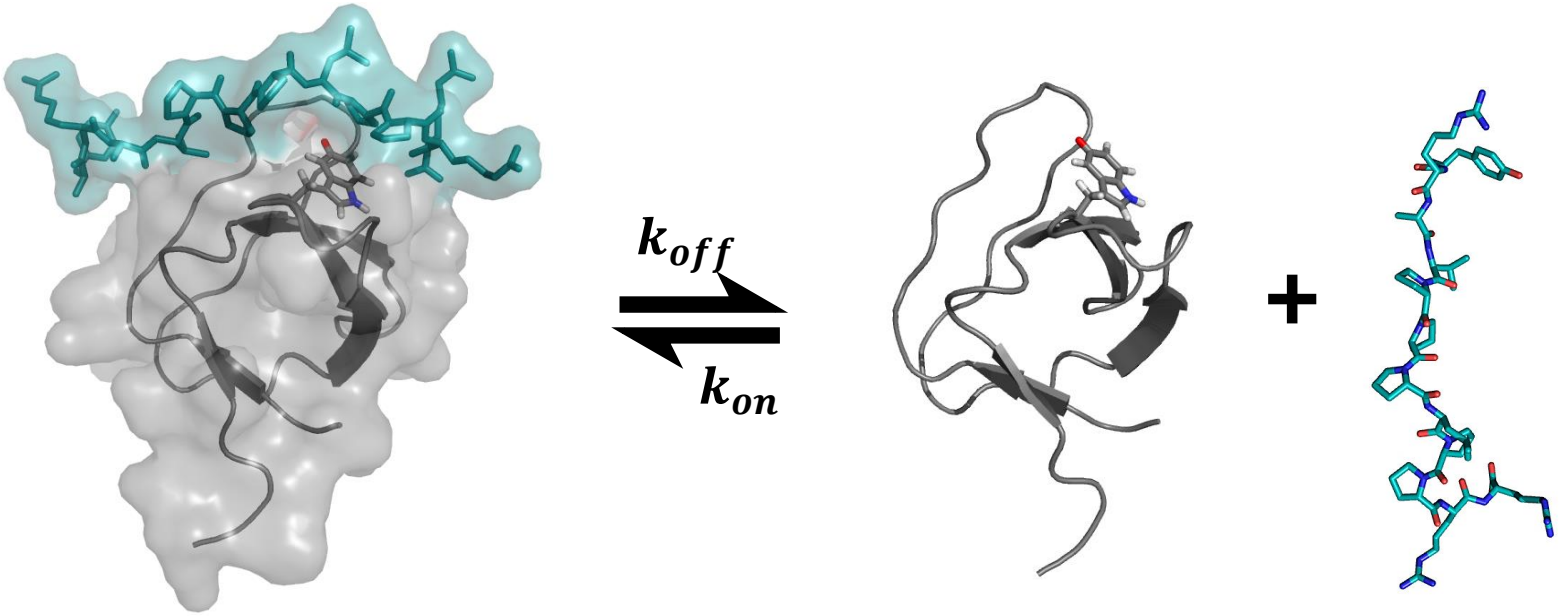
100% abundant

Sensitivity (83% proton)

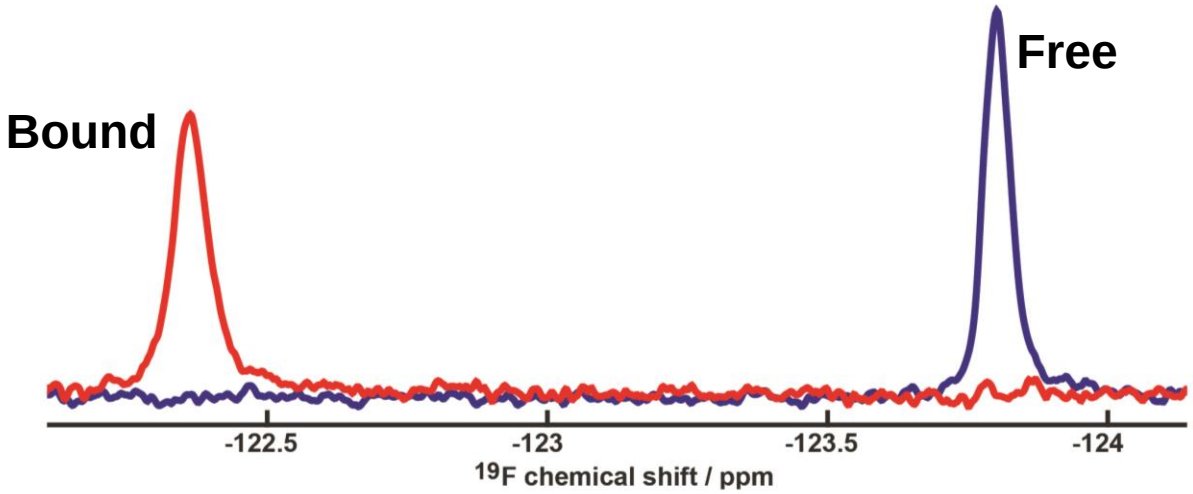
Rare in biology

Easily incorporated into proteins

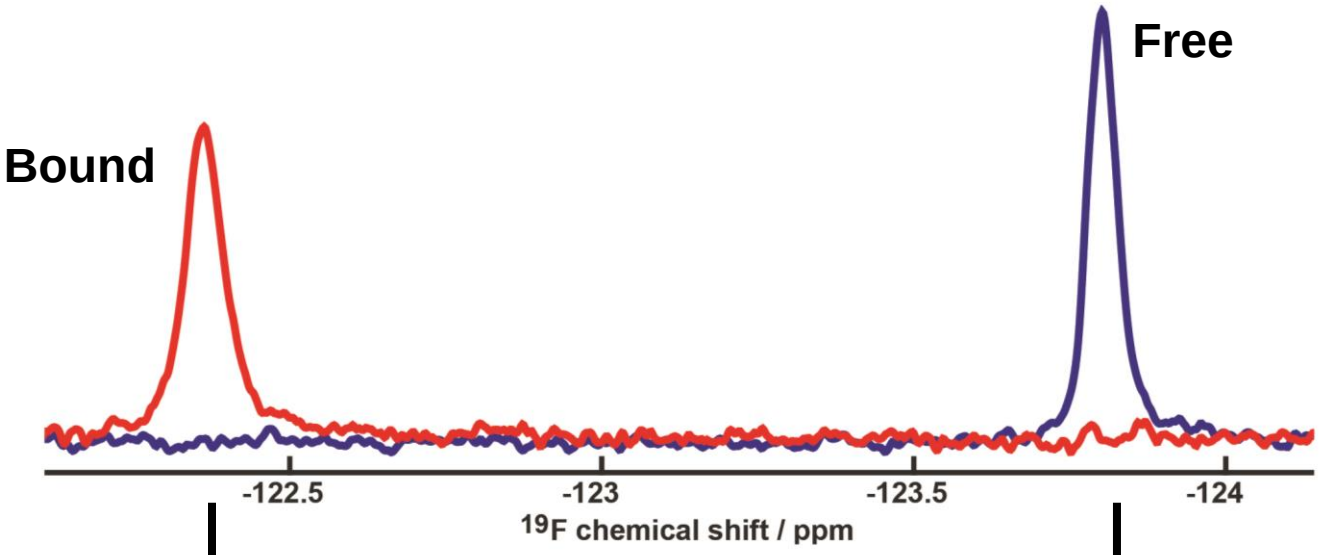
Peptide binding affects ^{19}F chemical environment



$$k_{ex} = k_{on}[peptide] + k_{off}$$



NMR lineshapes are information-rich



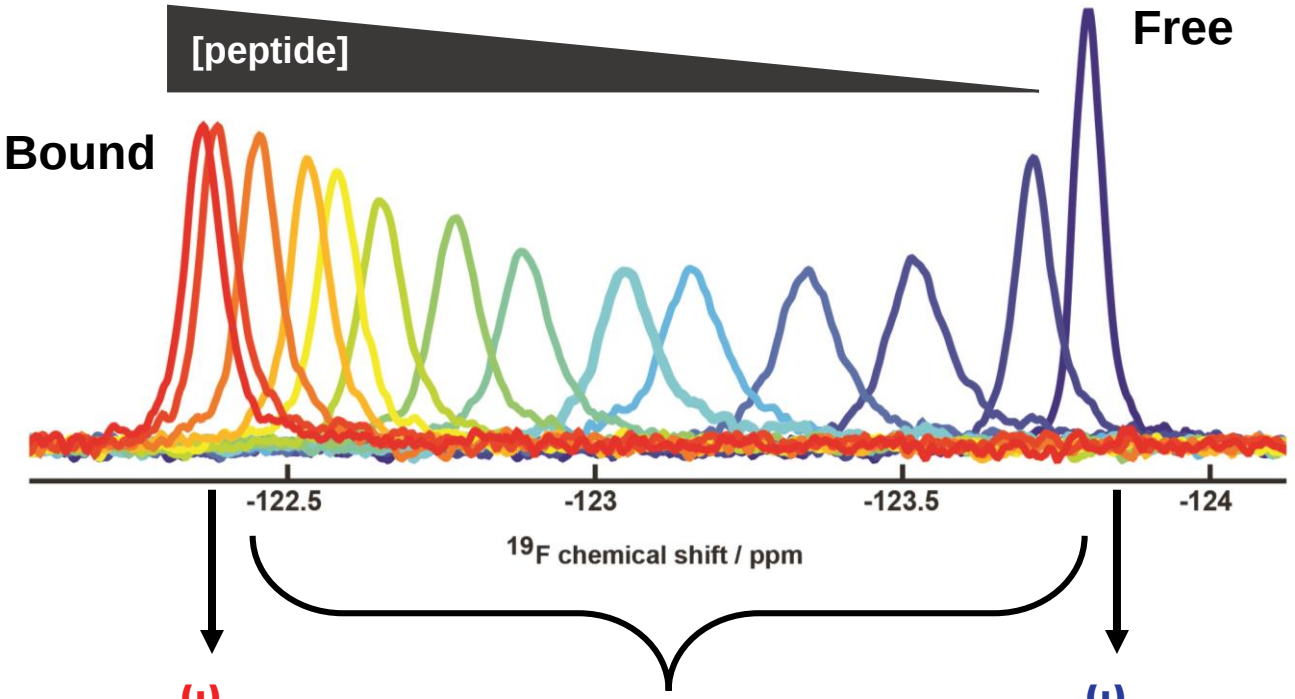
ω_B p_B R_{2B}

ω_A p_A R_{2A}

Lineshape = solution to Bloch equations

with Chris Waudby

NMR lineshapes are information-rich



Lineshape = solution to Bloch-McConnell equations

K_D, k_{ex}, [SH3]=constant, [peptide]

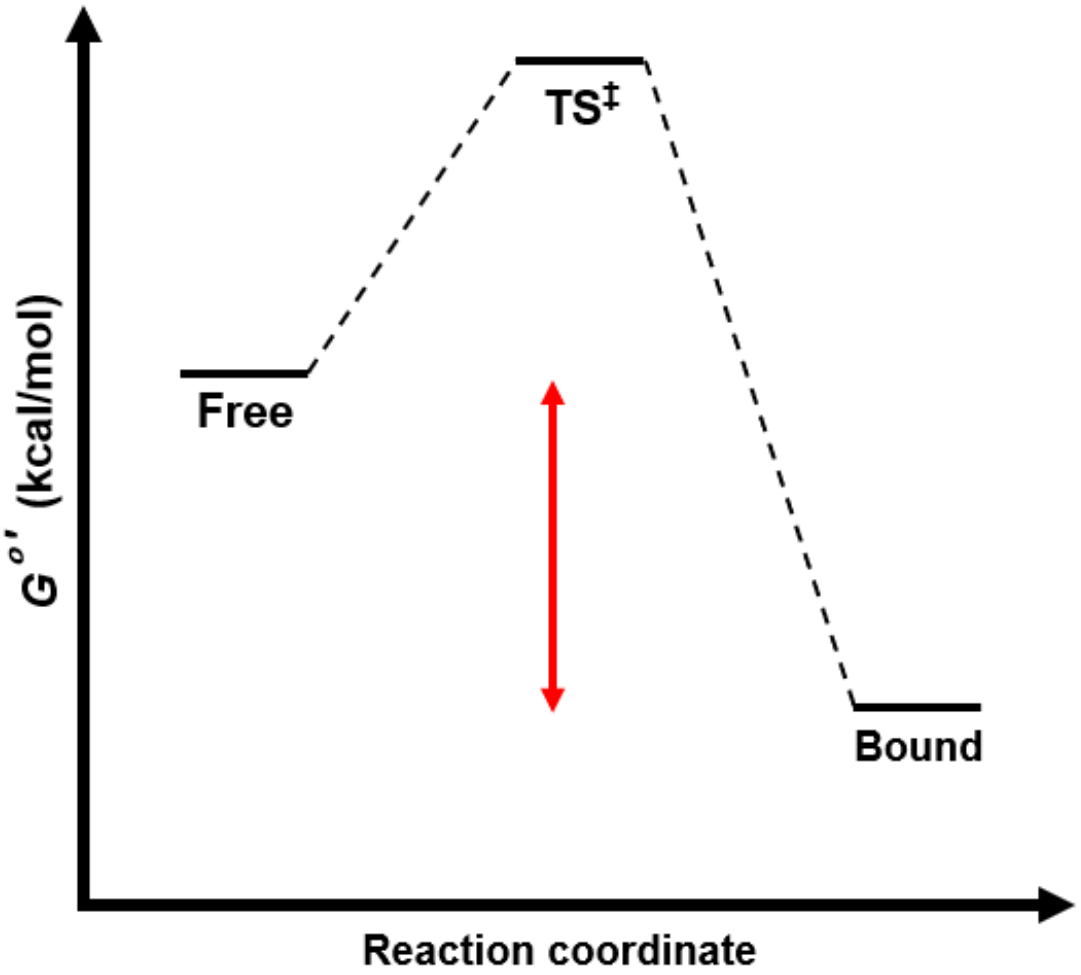
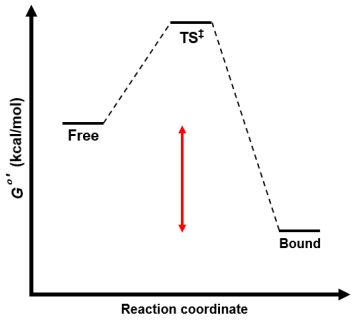
Electrostatic crowder-SH3 interactions slightly perturb binding affinity

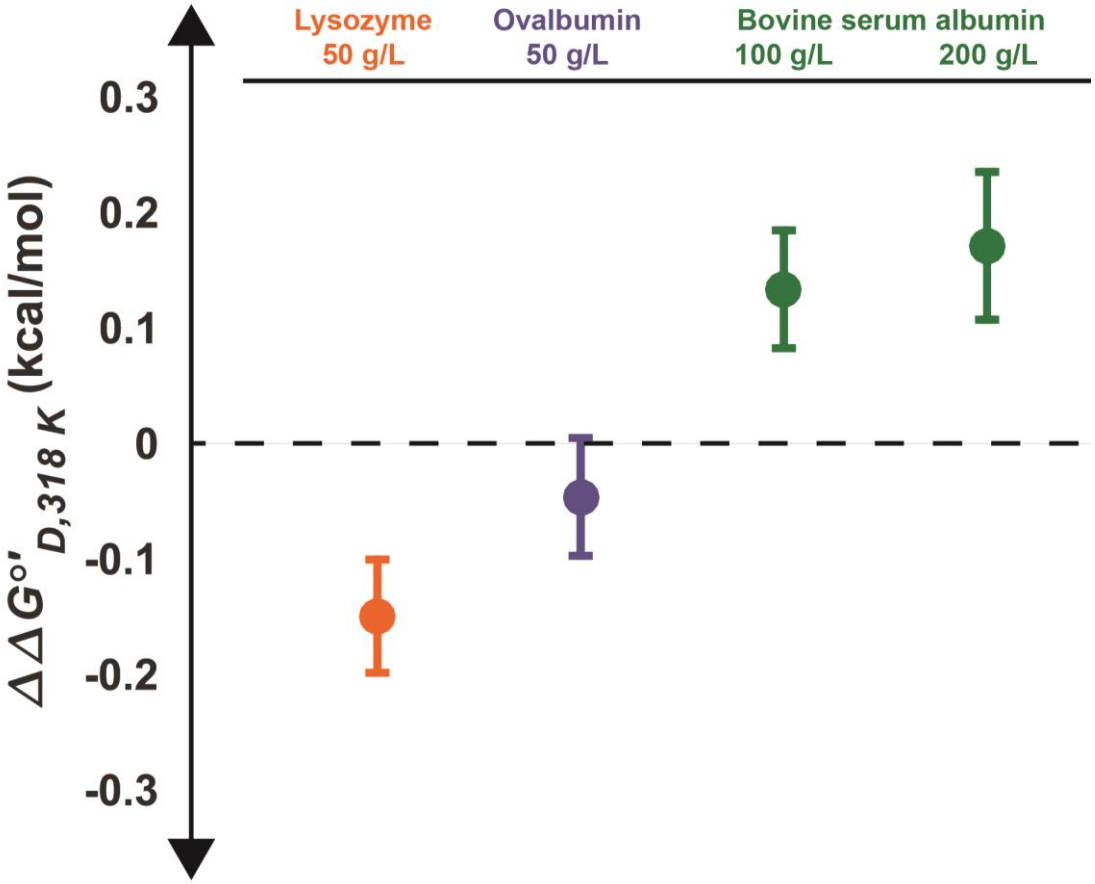
$$\Delta\Delta G_D^{\circ\prime} = \Delta G_{D,crowder}^{\circ\prime} - \Delta G_{D,buffer}^{\circ\prime}$$



Electrostatic crowder-SH3 interactions slightly perturb binding affinity



$$\Delta\Delta G_D^{\circ\prime} = \Delta G_{D,crowder}^{\circ\prime} - \Delta G_{D,buffer}^{\circ\prime}$$

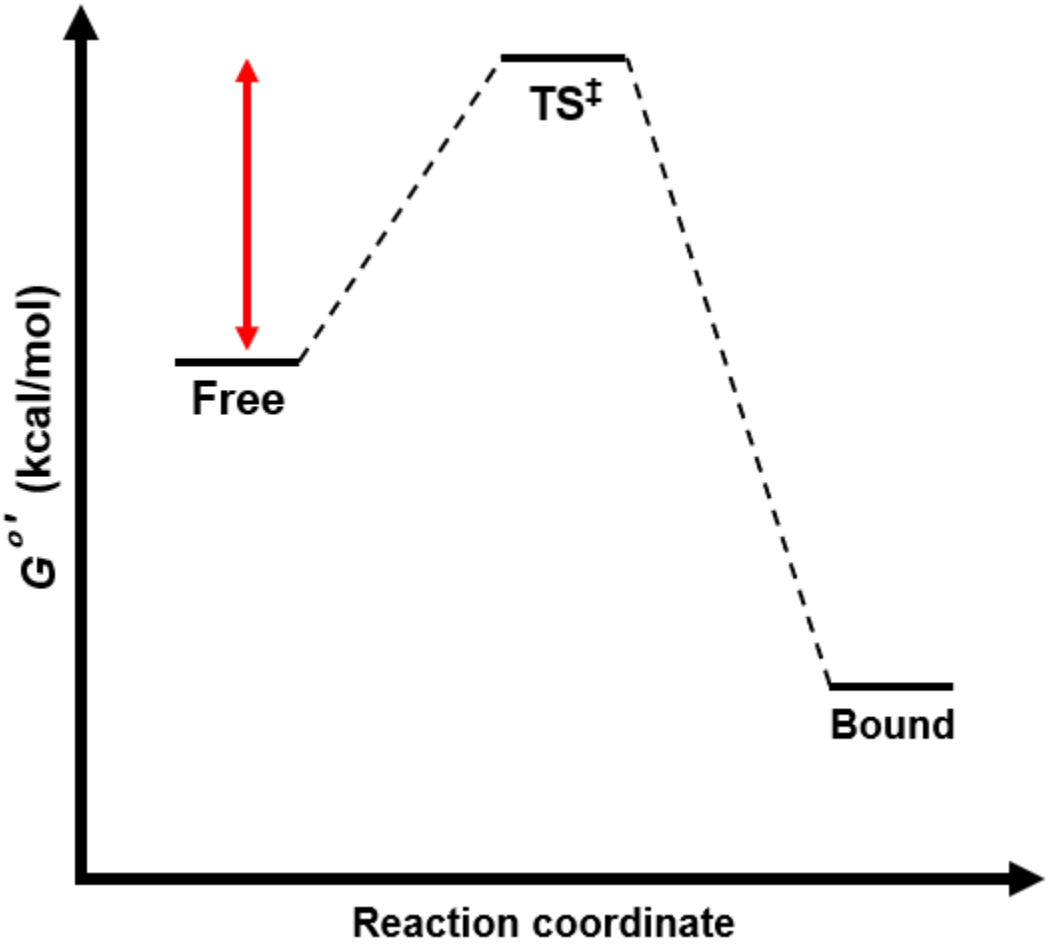


Stabilizes complex

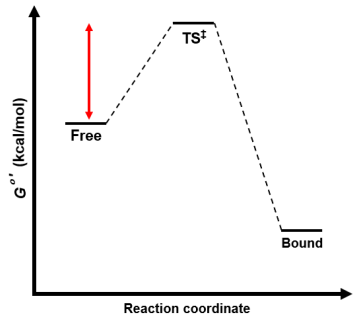
Destabilizes complex

Crowder charge dictates kinetic effects

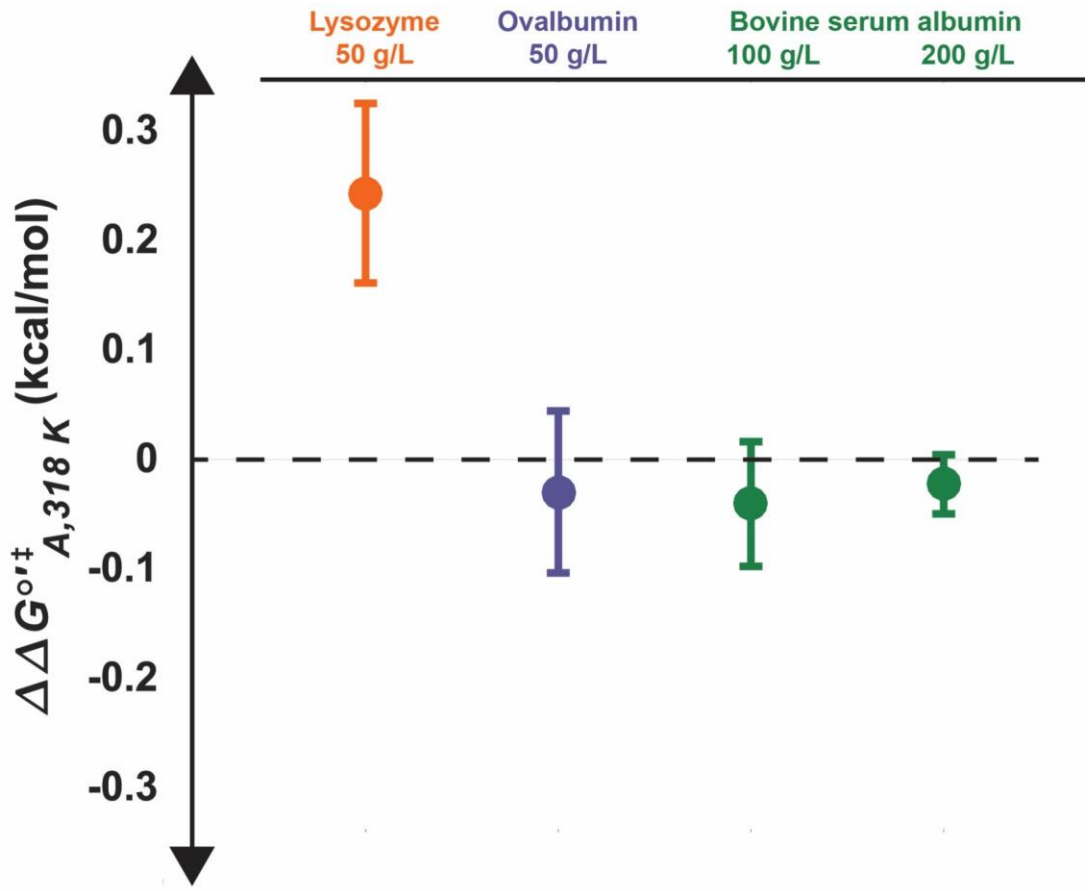
$$\Delta\Delta G_A^{\circ\prime\ddagger} = \Delta G_{A,\,crowder}^{\circ\prime\ddagger} - \Delta G_{A,buffer}^{\circ\prime\ddagger}$$



Crowder charge dictates kinetic effects



$$\Delta\Delta G_A^{\circ\prime\ddagger} = \Delta G_{A,\,crowder}^{\circ\prime\ddagger} - \Delta G_{A,buffer}^{\circ\prime\ddagger}$$



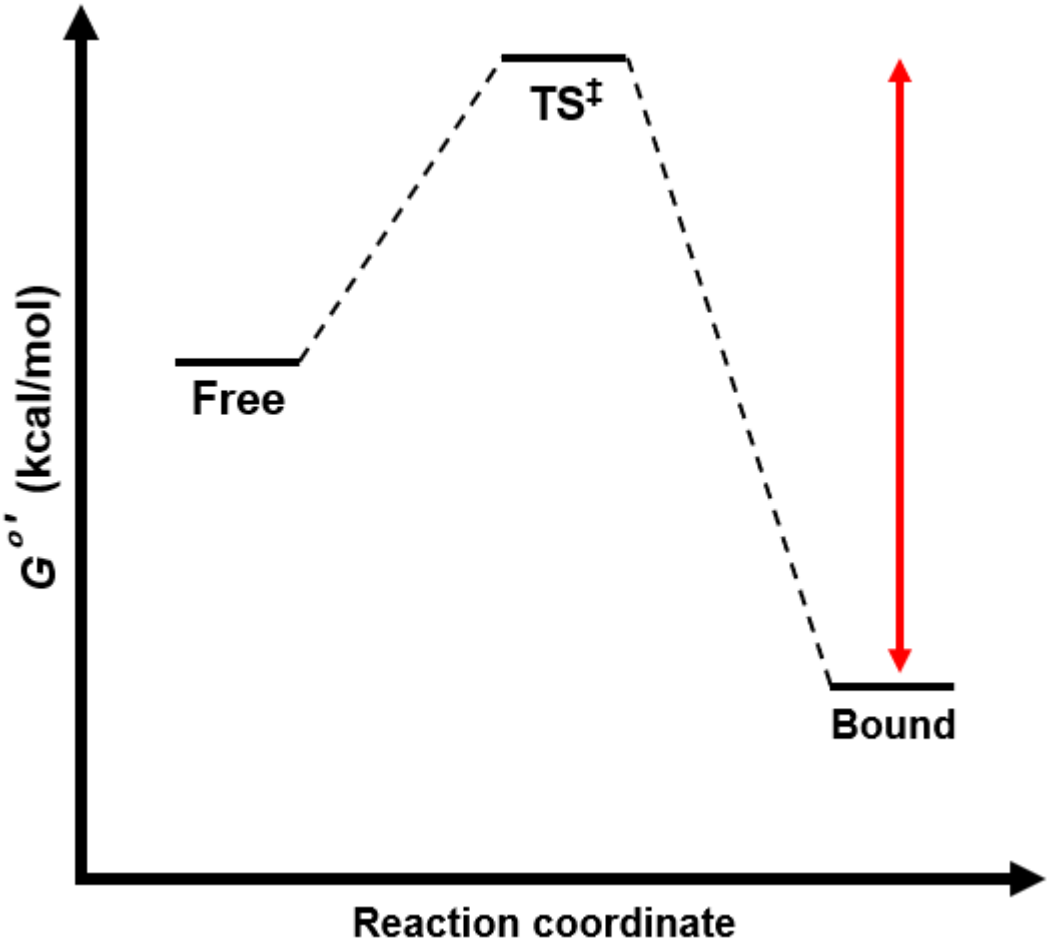
Increases barrier to association

Decreases barrier to association

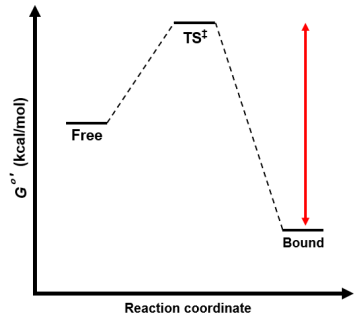
Only positively charged lysozyme affects the association rate constant

Crowder charge dictates kinetic effects

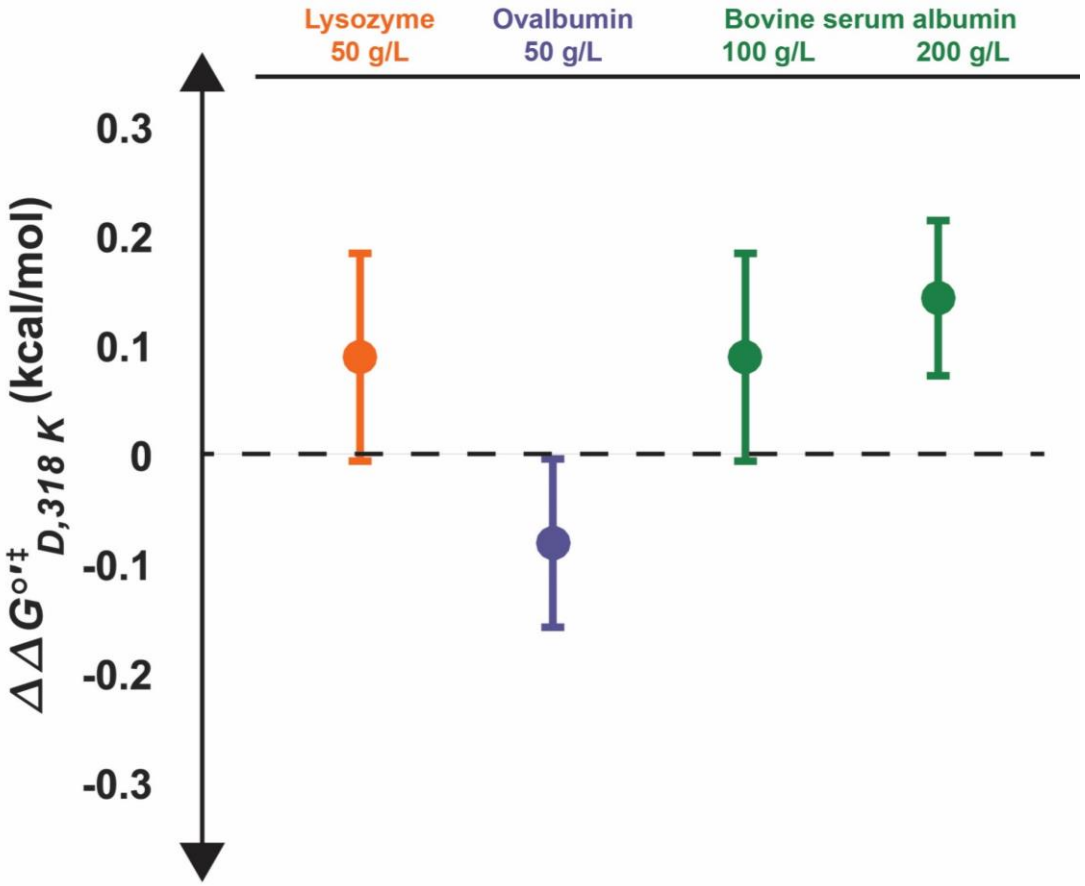
$$\Delta\Delta G_D^{\circ\prime\ddagger} = \Delta G_{D,\,crowder}^{\circ\prime\ddagger} - \Delta G_{D,buffer}^{\circ\prime\ddagger}$$



Crowder charge dictates kinetic effects



$$\Delta\Delta G_D^{\circ\prime\ddagger} = \Delta G_{D,\,crowder}^{\circ\prime\ddagger} - \Delta G_{D,buffer}^{\circ\prime\ddagger}$$



Increases barrier to dissociation

Decreases barrier to dissociation

Only high concentrations of negatively charged BSA affects the dissociation rate constant

Future Crowded Conditions
